

Torino, 4 Giugno 2020,  
To whom it may concern,

I'm Anatoli Nicolae, a 24 years old **full-stack developer** currently located in Turin, Italy.

My main goal is to **find new perspectives in software development**, so I'm looking for a dynamic environment that constantly brings new experiences to the table as **I'm constantly working on my skills** since I first started coding at 13 years old.

I've had abroad internships, such as the one in Mallow, Ireland as a PHP developer where my job was **a significant contribution** to the implementation of a booking system based on WordPress for a kids playground, so even I have a shy personality, I think I may fit in with the team in short or even no time at all.

*I was part of teams, managed teams at thundersquared and co-managed teams at Poker SpA, constantly requiring a lot of **individual effort in learning and applying knowledge** to better use single team member's skills and knowledge and **bring more value** to the final product. Of course teams work well when there is a good balance between members— though aiming at the best doesn't always please everyone, *there wouldn't exist innovation without pushing boundaries.**

Due to my young age, I can't actually *convey* my seniority as often things on the paper sound **way better than they're actually are**—this is not the case though. Beside my skills, there's also a trial-and-error process that **helped me to better learn the tools** as well as figure out what can actually **help the development process** and increase final product performance, and this can't be described. Also talking from experience, **not every developer is passionate about their job, technologies or learning**—since a young age, I've always kept trying and learning new things to the point where I have a server on my bedside as I often play around and destroy stuff.

Back to my experience, I'm currently working as a **full-time senior full-stack developer** at Poker SpA, on multiple projects such as SugarCRM as a **PHP developer** of custom modules, Arxivar as a **C# and .NET developer** (even though I hate it) for custom integrations and plugins and our REST server interface written in **Node** for Quasar-X which is an in-house made ERP. We're currently also working on implementing modular micro services for specific deployment types in **Go and Rust** as well as switching over from Docker Swarm clusters to **Kubernetes**—basically hardcore stuff.

These are not the only technologies we “face” everyday because all of our stacks are **defined, deployed and maintained using Docker**, continuous integration for custom images built via GitLab Runners (previously Jenkins) and a nice internal deployment tool of these stacks, **for a standardised installation and multi-customer hosting**. I've been also working with React and React Native mainly for a custom **React Native Android app** for a client.

Beside this, I'm also running a small web agency at thundersquared, mainly focused on building **small WordPress websites and shops with WooCommerce**, building **custom CMS products** based on Laravel and providing hosting with a **solid infrastructure based on Ansible**. At thundersquared we offer also design services and other social media management solutions and lately we've managed to partner with Red Hat, DigitalOcean and WP Engine for a **streamlined cloud experience**.

Lately I've been playing with **Ansible, Kubernetes, Go and Rust**. The latest project involved thundersquared's web infrastructure which is now automatically **provisioned, configured and secured** through Ansible—it's good to know everything is reproducible and quickly fixable.

As previously mentioned, I really like to **dive into new tech** and that's why a lot of my skills come from a **self-teaching activity**. I have also some hobbies as listed on my CV, such as **video production** starting from planning, shooting scenes to editing. I own a drone as **the idea of seeing the world from a different point of view** was a great selling point for me and also because it adds a nice touch to videos. I have also published some songs on Spotify and similar platforms since I also enjoy experimenting in Ableton, producing and mixing music.

Hope you found this useful and I'm looking forward to hear from you.

Thanks for now,  
*Anatoli.*

A handwritten signature in black ink, appearing to be the name 'Anatoli' in a cursive, lowercase font.
